Milestone Care™ Plus

WHEN YOU WANT TO PROTECT YOUR INVESTMENT

XProtect® video management software (VMS) products are updated on a recurring basis to become safer and more efficient and powerful. Milestone Care Plus is designed as a software maintenance service. It ensures you have instant access to the product updates. This helps to protect your initial investment and ensure the solidity of your system.

Here's what you get with Care Plus
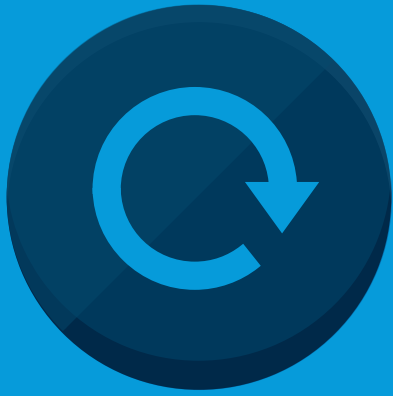

Recurring product updates
Instant access to recurring product updates gives you access to a wealth of new capabilities that are designed to make your product safer and more efficient and powerful.

Use the XProtect Version Comparison Tool on our website to see how fast XProtect is evolving over time.

Full return on your investment
Your present security installation might meet your current needs, but you may wish to expand your installation or upgrade it to a more advanced Milestone version over time. Care Plus lets you put the full trade-in price of your current Milestone product towards an upgraded solution.

This is a cost-effective way to adapt your system to changing needs while giving you a full return on investment.

STAY UP TO DATE

It may seem tempting to delay or even avoid software updates, but doing so means missing out on improved functionality and innovations. Delaying updates may even leave your system vulnerable to potential security threats.

Three good reasons to keep your system up to date

1

Keep systems at peak performance
You don't want to be stuck with a system that can't meet future demands.

With Care Plus, you always have access to the latest product version. This ensures you are always benefitting from the latest technology and innovations intended to improve your product.

2

Secure technology fit over time
Add and benefit from new technology as it hits the market to continually improve your system.

Running the latest version means that you can take advantage of new technology that is built to improve performance and better utilize your existing hardware.

3

Reduce vulnerabilities
A secure system starts with an up-to-date system.

Milestone instantly responds to new potential security threats – with Care Plus you have the peace of mind that this is being reflected in the recurring product updates.
